

Managing the Testing Tool Stack

Clint Sprauve

Enterprise Strategist

Testing challenges with DevOps

Staffing: Finding staff with the appropriate skill set (54%)

Maintenance: Maintaining test scripts makes it difficult to achieve continuous test automation (48%)

Mindset: Shifting team/organizational mindset to embrace test automation (47%)

Finding tools: Finding/selecting the right tools for your needs (42%)

Tracking progress: Managing and tracking test automation efforts across multiple tools (41%)

Complexities of the DevOps Technology Stack

Agile Test Management for the Enterprise

- **Seamless agile testing** by providing manual and automated test traceability to Jira issues, bugs, and releases in real-time.
- **Shift quality left** with open source and commercial test automation management, test script scheduling, and support for BDD.
- **Power Agile and DevOps workflows** through out-of-the-box integrations with the most popular development tools (e.g. Jenkins, Bamboo).

Analytics, Metrics and Insights

Thank You!

Meet me in the chat lounge after the presentation.
